

# Form creation – data flow (cloud-based)

**Note:** This flow diagram illustrates the process of using Open Data Kit (ODK) to create a form for monitoring forests, to be used on a mobile phone, and then using Smap to upload the form to a cloud-based hosting system, so that it can be accessed and downloaded by users. It is part of a set of resources on using digital technology for community based forest monitoring, hosted on GCP's Forest COMPASS website. For a full tutorial, please visit [www.forestcompass.org](http://www.forestcompass.org).
